

Test Task for PHP Developer Job:

The task should be performed in CodeIgniter framework of PHP.

The design/UI does not matter, use any or just simple form with bootstrap.

1. Create a registration form where user can enter following fields:
 - Username * (Unique)
 - Email ID * (Unique)
 - Password *
 - Re-enter Password *
 - Date of Birth *
 - Mobile Number *
 - If user is minor, Email ID * and Mobile Number * of guardian
 - Address Line 1
 - Address Line 2
 - City
 - State
 - Country
 - Reason for Registration
 - PDF Upload * (Only one file)
 - Image Upload (Up to 5 images allowed)
2. After registration completed redirect to a page where a "PDF Download" button is given and on click of that button download a PDF containing all these informations.
(PDF will display all uploaded images on page 2, if any)
(Page 1 should contain all input fields, except password)
3. Save encrypted password on database.
4. Complete JavaScript validation as well as PHP validation.
5. Push the code to GitHub and share the public repository link with me. Also mention how many hours did the task took to get completed.
